

Coding Test

This is a simple coding test. Please use the accompanying files to develop a web page. Only HTML & CSS are required, although other languages are not discouraged. Attached files include the two images used on this site, as well as desktop and mobile mockups. You can pull the copy from the PDF mockup.

Please feel free to email Tori, torim@bayardad.com, with any questions!

WHERE AND HOW TO SEND

Once files are completed, send to Tori MacMillan as a zip file.

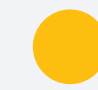

Notes

- Fonts are Google Fonts **Lora** and **Source Sans Pro**, light and bold weights
- This site needs to be responsive and work at all breakpoints. You determine where the breakpoints are based on the design & content.
- We have provided desktop and mobile mockups, please use your judgement for the layout for the breakpoints in between.
- You can use your own grid system or a framework such as Bootstrap or Foundation.
- Sizes do not need to be to the exact pixel size as the mockup. We understand responsiveness requires flexible and changing spacing and font-sizes. Use the mockup as your guide as well as your best judgement.
- This is for us to see your coding style and organization. Please do not feel restricted to HTML & CSS. For example - if you prefer to use PHP includes for your header and footer, feel free to do so.

Functionality

- Use dark orange as the 'learn more' button hover/active/focus color in the main section, and dark grey for the form submit button.
- Form does not need to be functional, as the languages needed to do so are not required for this test. However, making it functional is welcome.
- If you make the form functional, have it send an email to torim@bayardad.com with the submitted form info in the body of the email. **Please make sure you use anti-spam security measures in the form, such as CAPTCHA or a spam honeypot.**
- You can leave the link hrefs blank.

Hex Values

-  #00b7f1
-  #febe10
-  #f78546
-  #d4631c
-  #f1f3f6
-  #aeb5be
-  #323e48
